1 General Information and Safety Instructions

This guide serves as an aid during start-up and inspection of TPM motor gear units with servo amplifiers. It contains the following points:

- Parameter lists for the TPM series
- Connection schematic for TPM
- Assignment table TPM – Servo amplifier - cable set

Please be sure to carefully read through this document before starting up the TPM and also be sure to read the documentation provided by the manufacturer of the servo amplifier.

WITTENSTEIN motion control will not be held liable for the consequences of the improper, negligent, or incorrect installation or setting of the servo amplifier's operating parameters.

All of the installation, operation, and safety information provided in the servo amplifier documentation is to be observed.

Observe all of the national safety regulations and guidelines of the country where the device is being used. All transportation, installation, start-up, and service work is to be performed by qualified technicians. Qualified technicians are those who are completely familiar with the assembly, installation, and operating procedures, as well as all warnings and safety measures in accordance with the country-specific regulations. Furthermore, they are trained, instructed, and authorised to set the electrical circuits and other devices into operation in accordance with safety regulations.

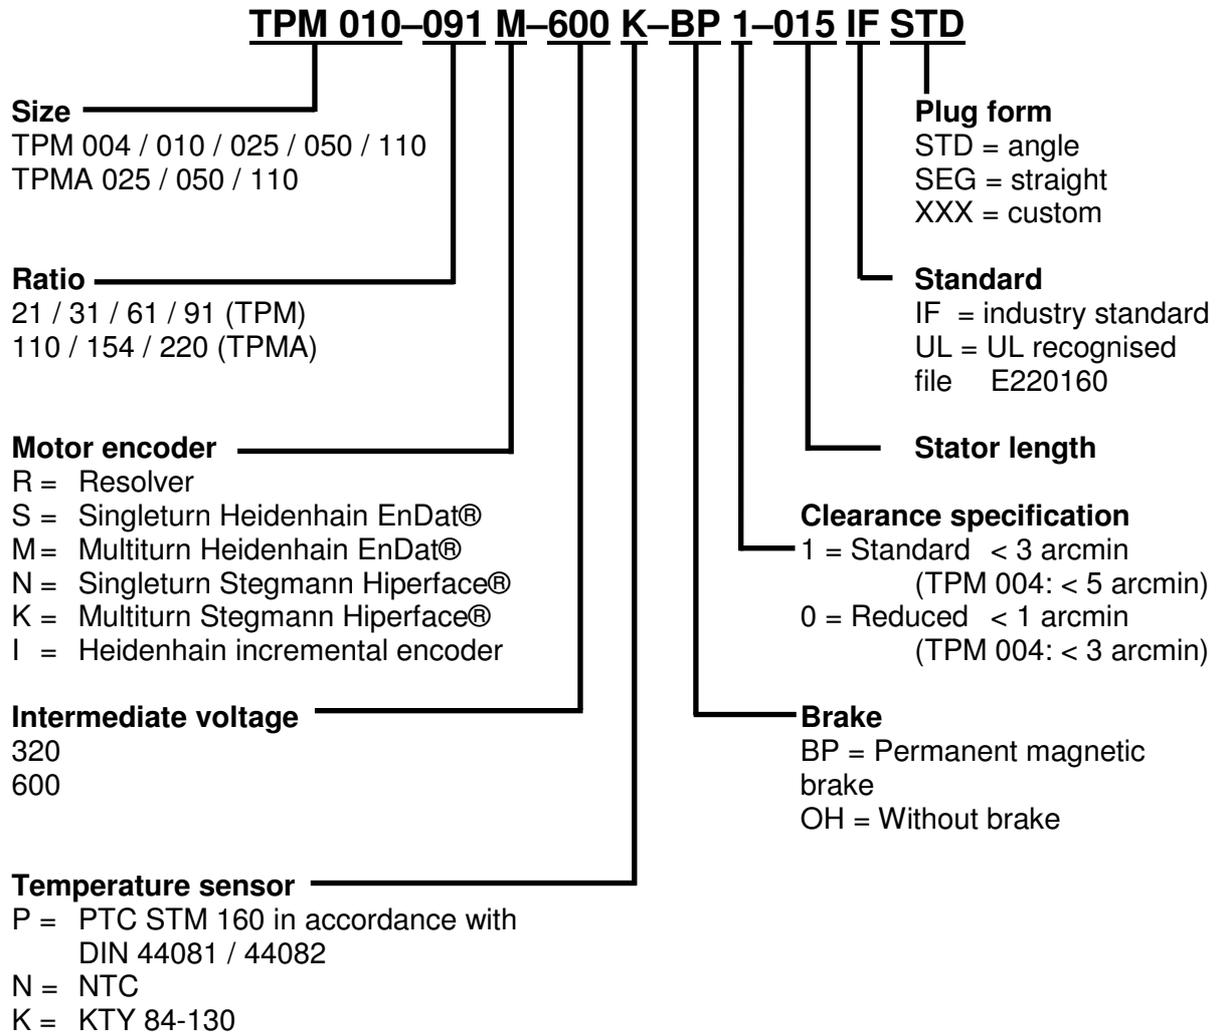

The drives are intended to be installed in machines being used in commercial applications. You may only operate the equipment if you comply to the national EMC regulations (refer to the servo amplifier documentation for installation information pertaining to EMC) as they are defined for the given application.

Note: All of the product brand names which appear in this Quick Start Guide are trademarks of the relevant companies. If the ® and/or ™ symbols are omitted, this does imply that the name is a free brand name.

2 Name plate data details

Please select the input parameters corresponding to the nameplate values of your TPM.

3 Parameter list TPM / TPMA ↔ Servostar 600

The following table contains all of the parameters that are required for the initial start-up of a TPM motor-gear unit from WITTENSTEIN motion control together with a Seidel Servostar 600. When the TPM and the servo amplifier are properly connected, these parameters guarantee that the TPM can be operated without load in speed control. Based on these default settings, the dynamics of the speed loop can be optimized depending on the application.

3.1 Selection of the motor feedback and encoder offset

For the selection of the motor feedback and the encoder offset the following inputs must be done:

1. Open the screen **Terminal** in the Drive software
2. Depending on the motor feedback enter the following commands:
Resolver: **MRESPOLES 2**
 FBTYPE 0
Heidenhain EnDat: **FBTYPE 4**
Stegmann Hiperface: **FBTYPE 2**
After input of **FBTYPE <WERT>**, please confirm the message „Save to EEPROM and reset?“ with „YES“
3. After the restart open the Screen **Terminal** and enter the encoder offset with the command **MPHASE <OFFSET>**
Instead of <OFFSET> enter the appropriate value of the following parameter list
4. For TPM with **Resolver** you must save the offset in the amplifier with the input of the command **SAVE**
For TPM with **EnDat** you must store the offset to the encoder with the command **HSAVE**
For TPM with **Hiperface** you must store the offset to the encoder with the two commands **HSAVE ERASE** and **HSAVE**
5. Restart the amplifier with the input of **COLDSTART**

3.2 TPM with 320 V DC-bus

¹ WMC recommendation is based on use of a power stage with maximal PWM-frequency. Please refer to WMC or controller manufacturer to select optimized controller size for the application. Possibly you are able to use a smaller controller.

Power and signal cable to connect on motors with Stegmann HIPERFACE

All cable complete and for dynamic laying

Power cable TPM 004-050	KABELL-TPM_-xxSTD_-END015-STG	Design power cable:	4 x 1,5mm ² + 2 x 1mm ² , diameter 12mm, min. bending radius 120mm
Power cable TPM 110	KABELL-TPM_-xxSTD_-END025-STG	Design power cable:	4 x 2,5mm ² + 2 x 1mm ² , diameter 15,1mm, min. bending radius 151mm
Signal cable	KABELS-TPM_-xxSEL_-HIP000-STG	Design signal cable:	4 x (2 x 0,25mm ²) + 2 x 1mm ² , diameter 8,8mm; min. bending radius 88mm

(xx = cable length)
