

Mounting kit – Hygienic mounting

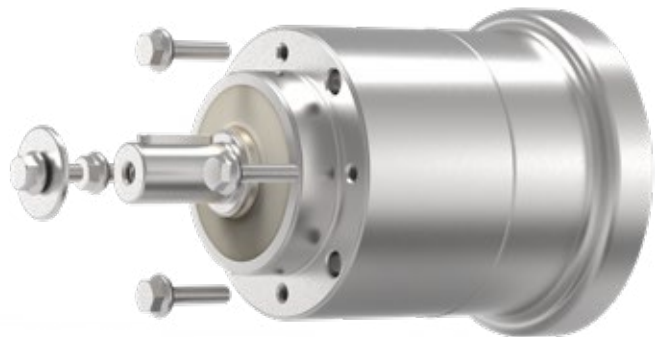

Hygienically safe mounting

Our Hygienic Design[®](i) products have been designed for applications that require maximum cleanability and leak protection. To meet these requirements in a comprehensive approach all the way to the connection of the gearbox, the gearbox must be mounted to the product in a tailor-made and hygienically safe manner. Therefore we have developed special mounting kits to ensure a hygienic connection with maximum process reliability. The sealing parts and screws included in the mounting kit[®] prevent hygienic weak spots and seal cavities on the application side.

HDV and axenia value:

The mounting kit for our HDV and axenia value includes:

- O-rings to seal the direct contact surfaces between gearbox and machine
- A suitable stainless steel(i) screw set with screw head seals for assembly to the machine
- A disc to seal the centering in the output shaft

HDP⁺:

The hygienic mounting kit for our HDP⁺ contains:

- O-rings to seal the direct contact surfaces between gearbox and machine
- a sealing disc for the final sealing of the flange connection

Advantages for you:

- Take advantage of the opportunities to save storage capacities by packaging of the mounting material
- Benefit from a comprehensive solution for maximum process reliability
